

The e-Messaging Server Text Messaging Gateway includes a web browser-based client for those organisations who do not operate an internal email network, or where the use of email to send and receive text messages is unsuitable. User authorisation management ensures that only permitted users can access the eText Web client.

#### eText Web

eText Web provides a full capability to send and receive text messages, manage address books, and personalise user settings. Messages of any length can be composed on screen, with a character count displayed.

#### Inbound Messages

Inbound messages (up to 1000 characters) can be displayed in an inbox, and can be routed to the individual web browser using a normal mobile number (allocated to the user's web browser), or a PIN code in the message (if using a shared central inbound number).

**Anne Jones's Inbox**

Mark as read | Mark as unread | Remove from inbox | Refresh

Received Date	From	Message
28/08/2008 14:46:10	447834128984	Out of the office for next 2 days
28/08/2008 14:39:14	447834128985	Meeting delayed until 3.00pm
28/08/2008 12:42:38	447768057210	Flight arrives at 15.00 Thursday

#### Address Books

Public address books can be shared between many users, or private address books can be setup and maintained by an individual user. Filter and search tools are provided with the address books.

#### e-Messaging Server

The eText Web client utilises a central e-Messaging Server for all user management, address book management, message traffic management and logs. The eText Web client can coexist with email and application text messaging via the same e-Messaging Server.

#### Summary

eText Web client provides the ability to send and receive text messages from a PC with a Web browser, without the need for any locally installed software.
